# Bases & Supplements

## BASES FOR MILK ICE CREAM

Together with the flavouring components, stabilisers represent the central part of a successful ice cream recipe. We offer a range of emulsifier / stabiliser compounds which optimally covers all types of ice cream – from industrial to artisanal. The products are tested constantly in our competence center and then developed further.

## BASES FOR FRUIT ICE CREAM

This range has been developed to offer great creaminess to fruit ice cream and to assure, at the same time, the freshness, the flavour and authenticity. Also suitable for frozen syrups, the stabilisers are ideal for preparing different types of syrups, with different Brix degrees.

## STABILISERS & SUPPLEMENTS

For hot or cold processing, for milk or fruit ice cream, this range of concentrated stabilisers was developed for the artisans and industry producers who want to customise their recipes. They give a fine and silky texture and increase the overrun of the ice cream. Supplements used in the recipe according to different dosages, enrich the dry matter and the density of the mixture and improve creaminess, eliminating the crystallization and delaying the melt of the ice cream.
